

102 One Step Wash

Wash For Quick Colour Change

Technical Data Sheet

DESCRIPTION:

With special colours, switching from one colour to another on the same printing unit demands multiple washing cycles. Cleaning with regular press wash proves time consuming and yet fails to deliver the desired shade demand of the job. 102 One Step Wash is a powerful blend of hydrocarbons with various Kauri Butanol values which helps in stripping off the colour pigments and ink residues in a single wash., thus saving on time and cost of consumables like press wash and roller pastes etc.

DIRECTIONS FOR USE:

Wash the inking train once with the normal press wash and rinse with water. Keep the machine in idling mode and pour adequate quantity of 102 One Step Wash directly on to the inking train. Let the product act on the rollers for about five minutes while intermittently pouring the product as and when required. Apply wash up blade and clean the roller train with water before charging the new ink on the roller train.

FEATURES AND BENEFITS:

- o Strips and deep cleans the rubber roller in one step.
- o Triple action product. It deglazes, Rejuvenates and Conditions the rubber surfaces.
- o Safe to use on all types of rubber surfaces.
- o A medium evaporating product with deep cleansing action.

SPECIFICATIONS:

- o Flashpoint: 30 degrees Celsius
- o Drying Speed: medium
- o Solvent Strength: Strong
- o Odor: Strong
- o Composite Vapor Pressure (mmHG): 3.0

PACKING :

05 LTRS X 4 pcs
